

BREATHE EASY

Whether industrial, commercial, hospitality, or multi-unit residential buildings, LIFE BREATH solutions are designed to balance the desire to conserve energy with our need for a healthy environment.

The LIFE BREATH commercial product line features a variety of models and efficiencies for superior performance. Our efficient, compact yet powerful design, offers you optimal balance of overall air quality, intelligent design and increased building's asset value.

Breathe easy
with LIFE BREATH
Commercial
Solutions

Lifebreath is an industry leader in manufacturing indoor air quality products for over 35 years.

Commercial HRV/ERV Solutions

LIFEBREATH

PURE PERFORMANCE™

A BREATH OF FRESH AIR AND ENERGY EFFICIENCY

With today's building codes, structures are intentionally made to be more airtight. Consequently, as building efficiency is improved with insulation and weather stripping, it becomes poorly ventilated; resulting in a greater load placed on the heating and cooling ventilation and infiltration systems.

As the price of energy continues to increase, Contractors, Builders and Property Owners are looking for alternatives to reduce these costs in high occupant density buildings. Proper air ventilation from our LIFE BREATH HRV/ERV units reduce the heating/cooling load:

- Decreasing energy consumption and cutting operating costs by reclaiming heat and humidity from the exhaust air of the building with an ERV
- Controls the creation of mold causing moisture
- Ensures ventilation and energy recovery standards are met
- Faster return on investment
- Increases building's asset value

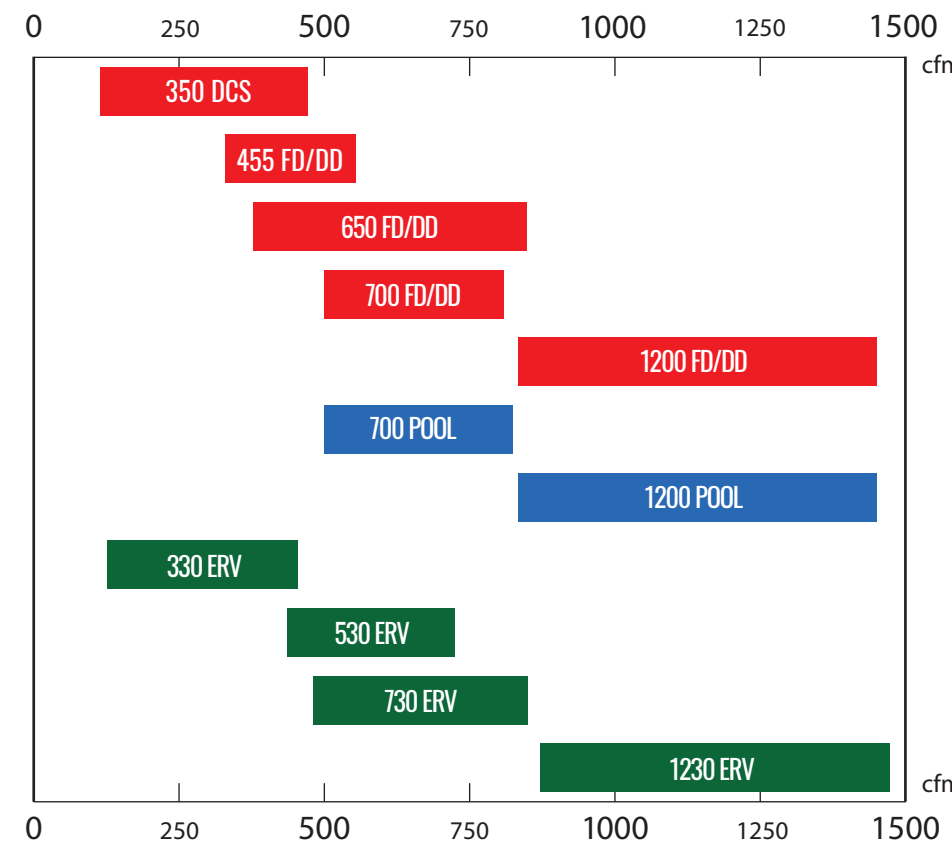

DOWNSIZE YOUR HVAC SYSTEM BY INCORPORATING AN HRV/ERV INTO YOUR DESIGNS

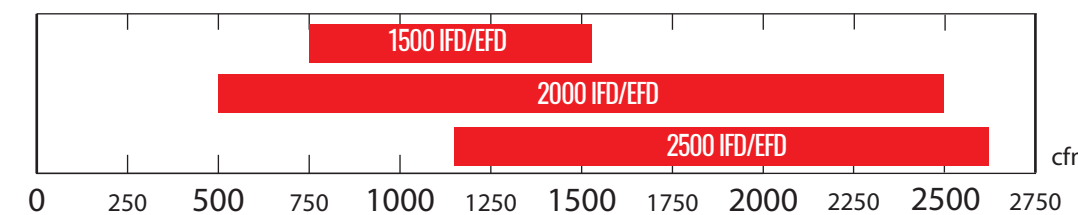

BEST IN CLASS IN QUALITY & DESIGN

LIFEBREATH HRV's and ERV's, motors and fans have all undergone extensive testing both in the laboratory and in the field. Our units drastically reduce energy consumption and improve the overall indoor air quality (IAQ). By exchanging air the energy from one air stream is transferred to the opposing air stream. This cost-effective technique results in ventilation air being warmer or cooler than the air outside depending on the climate and season. Each of our units has been developed with energy savings in mind; continually providing a positive cash flow over the lifetime of the system.

LIFEBREATH units come in a wide range of sizes, efficiency and air flow capacities for commercial installation (Please refer to individual specification sheets for full details).

LIFEBREATH high capacity units:

IT'S WHAT'S INSIDE THAT COUNTS

We Back Our Products

Our warranty includes; 15 years on the patented HRV aluminum core and 2 years on parts. The ERV core boasts 10 years warranty and 2 years on parts

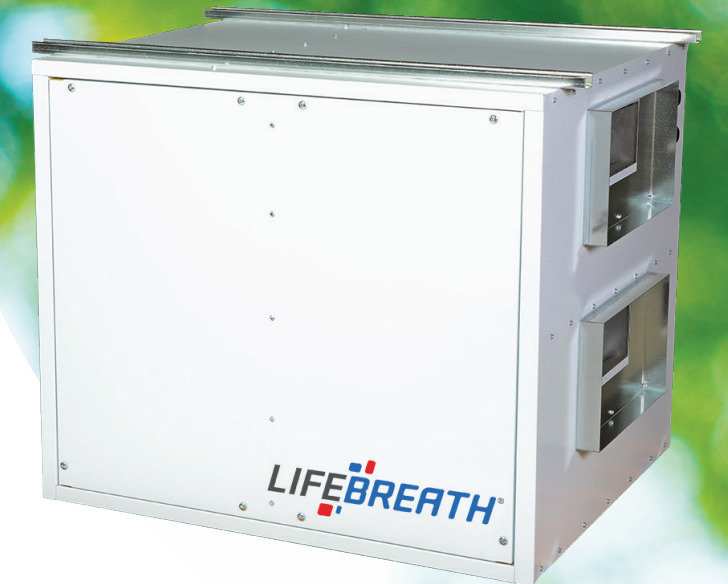

Certification

AHRI 1060 certified

Field Reversible

Electronics can be relocated to either side of the unit's cabinet, allowing maintenance access in a variety of installation configurations. Available on most units.

Lifebreath 455 DD Commercial Heat Recovery Ventilator (HRV)

Lifebreath 350 DCS Commercial Heat Recovery Ventilator (HRV)

Small but Mighty

Compact design yet a powerful airflow range of 300-2500cfm

Built Tough

Thicker steel gauge to maintain LIFE BREATH's superior quality

Manufactured Quality

Robust and reliable products built to provide nothing but PURE PERFORMANCE

Delivering Support

Knowledgeable Technical Support Team available via phone or email

Now that you know how LIFE BREATH can protect your business or commercial building; discover our energy saving product lines that deliver fresh air and savings to your bottom line.
